

DPAssist — Teacher Setup Guide

Complete setup instructions for teachers. No programming experience required.

Total time: About 60 minutes, one time only. After that, daily use takes 2 minutes.

What you will need before starting

- A Gmail account — this will send and receive all feedback emails
 - A Google Form already set up to collect student portfolio submissions
 - The Google Sheet linked to that form (Google Forms creates this automatically)
 - Your rubric as a PDF file
-

Step 1 — Create a Google Cloud Project

About 10 minutes

Google Cloud is where you give DPAssist permission to read your Google Sheet. Think of it as creating a secure key that only your app can use.

1. Open your browser and go to <https://console.cloud.google.com>
 2. Sign in with your Google account
 3. At the top of the page, click where it says "**Select a project**"
 4. Click "**New Project**" in the top right of the popup
 5. Type **DPAssist** as the project name and click "**Create**"
 6. Wait a few seconds, then confirm "**DPAssist**" is showing as the selected project at the top
-

Step 2 — Enable the Google Sheets API

About 3 minutes

This gives your project permission to read and write to Google Sheets.

1. In the left menu, click "**APIs & Services**" then "**Library**"
 2. Search for **Google Sheets API**, click on it, then click the blue "**Enable**" button
 3. Go back to the Library, search for **Google Drive API**, click it, and click "**Enable**"
-

Step 3 — Create a Service Account

About 10 minutes

A service account is like a robot assistant with its own email address. You give it permission to access your sheet, and DPAssist uses it to read your student submissions.

1. In the left menu, click **"APIs & Services"** then **"Credentials"**
2. Click **" + Create Credentials "** at the top, then choose **"Service Account"**
3. Type **dpassist-reader** as the name
4. Click **"Create and Continue"**, skip the optional steps, and click **"Done"**
5. Click on the service account you just created in the list
6. Click the **"Keys"** tab
7. Click **"Add Key" → "Create New Key"**
8. Choose **"JSON"** and click **"Create"**
9. A file downloads automatically — this is your credentials file. **Keep it safe.**

 **Important:** This file contains your private credentials. Never share it with anyone or post it online.

Find your service account email — you will need this in Step 4: Open the downloaded JSON file in a text editor (TextEdit on Mac, Notepad on Windows). Find the line that says

`"client_email"` and copy the email address next to it. It looks like: `dpassist-reader@your-project.iam.gserviceaccount.com`

Step 4 — Share your Google Sheet

About 2 minutes

Give your service account access to the sheet where your form responses are collected.

1. Open your Google Sheet (the one connected to your Google Form)
2. Click the **"Share"** button in the top right
3. Paste the service account email address from Step 3
4. Set the permission to **"Editor"**
5. Uncheck **"Notify people"** and click **"Share"**

Find your Sheet ID — you will need this in Step 7:

Look at the web address of your Google Sheet:

<https://docs.google.com/spreadsheets/d/THIS-PART-IS-YOUR-ID/edit>

Copy the long string of letters and numbers between `/d/` and `/edit`. Save it somewhere.

Step 5 — Create a Gmail App Password

About 5 minutes

DPAssist sends feedback emails to students using your Gmail. An App Password is a special one-time password that lets it do this safely — without using your real password.

1. Go to <https://myaccount.google.com> and click "Security" in the left menu
2. Under "How you sign in to Google", click "2-Step Verification" and make sure it is turned on
3. Search for "App passwords" in the search bar at the top of your Google Account page
4. Click on it, then type DPAssist in the app name box and click "Generate"
5. Google shows you a 16-character password — **copy it immediately and save it**

 **Google shows this password only once.** Copy it before closing the window. Remove any spaces when saving it.

Step 6 — Get a Gemini API Key

About 3 minutes

The Gemini API is the AI brain of DPAssist. It reads student portfolios and evaluates them against your rubric. The free tier handles most classroom sizes.

1. Go to <https://aistudio.google.com/app/apikey>
 2. Sign in with your Google account
 3. Click "Create API Key"
 4. Copy the key — it starts with `AIza` and is about 40 characters long
 5. Save it somewhere safe — treat it like a password
-

Step 7 — Deploy to Streamlit Cloud

About 20 minutes

This is the final step — putting your own copy of DPAssist on the internet so any teacher can use it from a browser.

Fork the repository

1. Go to <https://github.com/bmorrow574/DPAssist>
2. Click the "Fork" button in the top right — this creates your own copy of the code
3. Keep all the default settings and click "Create fork"

Create your Streamlit app

1. Go to <https://share.streamlit.io> and sign in with your GitHub account
2. Click "New app"
3. Fill in these fields exactly:

Field	Value
Repository	your-github-username/DPAssist
Branch	main
Main file path	portfolio_reviewer/teacher_ui.py

4. Click "Advanced settings" — do not click Deploy yet
5. Click "Secrets"

Paste your secrets

In the Secrets box, type the following — replacing each value with your own. **Type the apostrophes manually on your keyboard.**

```
GOOGLE_SHEET_ID = "paste-your-sheet-id-here"
GEMINI_API_KEY = "paste-your-gemini-key-here"
TEACHER_EMAIL = "your.email@gmail.com"
GMAIL_APP_PASSWORD = "your16charpassword"
RUBRIC_STORAGE = "sheets"
CHECK_INTERVAL_SECONDS = "60"
GOOGLE_CREDENTIALS_JSON = '''
paste entire contents of your service-account-credentials.json file here
'''
```

⚠ **The triple quotes are critical.** The last entry uses three apostrophe characters `'` on each side of the JSON. Type these manually — do not copy them from a document, as some apps replace them with curved quotes that will not work.

To paste the JSON file: Open `service-account-credentials.json` in a text editor. Press Command+A (Mac) or Ctrl+A (Windows) to select everything, then copy and paste it between the triple quotes.

Deploy

1. Click **"Save"** to save your secrets
2. Click **"Deploy"**
3. Streamlit builds and launches your app — this takes about 2 minutes
4. Once live, click the three-dot menu : → **Settings** → **App URL**
5. Type a name like `dpassist-yourschool` and save — your app will be at `dpassist-yourschool.streamlit.app`

✅ **Setup complete!** Bookmark your Streamlit URL — this is all you need to open every day.

Step 8 — Daily Use

Adding a rubric (once per assignment)

1. Open your Streamlit URL in any browser
2. Click **"Rubrics"** in the left menu
3. Upload your rubric PDF
4. Type the unit name **exactly** as it appears in your Google Form dropdown — capitalization matters
5. Set the due date and click **"Parse and Add Rubric"**

What happens automatically

Every 60 seconds, DPAssist:

- Checks your Google Sheet for new student submissions
- Scrapes the student's portfolio website
- Evaluates it against your rubric using AI
- **Before the deadline** → emails feedback directly to the student (no scores)
- **After the deadline** → creates a scored draft in your Gmail for you to review

Reviewing scored drafts (after the deadline)

1. Open Gmail and go to your **Drafts** folder
2. You will see one draft per student submission
3. Read the AI evaluation — edit anything you want to change
4. Click **Send** when you are happy with it

Remember: No scores are ever sent automatically. You review and send every final email yourself.

Troubleshooting

"Configuration Issues" appears on the dashboard Check the System Status page — it will show exactly which connection is failing. Make sure all your secrets are filled in correctly in Streamlit.

Students are not receiving feedback emails Check that your Gmail App Password has no spaces. Make sure 2-Step Verification is still enabled on your Google account.

Rubric upload failed Make sure your PDF has clear section titles and point values. Try re-exporting it from its original source.

The unit name must match exactly If your Google Form says "Milling About" the rubric must say exactly "Milling About" — not "milling about" or "Milling About!". This is the most common reason submissions don't get processed.

Google Sheet column requirements

DPAssist expects your Google Form responses sheet to have columns with these names (Google Forms creates most automatically):

- Timestamp
- What is your class section?
- What is your last name?
- What is your first name?
- Select the unit
- A column with "PUBLISHED" in the name (for the portfolio URL)
- What is your email address?

DPAssist automatically adds three columns if they don't exist: Status, Feedback Sent, Last Processed.
